

Measuring line renewal

MEASURING LINE RENEWAL ²

End customer

Zeeland Refinery

Starting position

The truck loading facility at Zeeland Refinery had already been closed for several years. Zeeland Refinery wanted to make this truck loading operational again due to changing market conditions.

Goals

A high-performance installation had to be built that was also reliable and user-friendly to serve customers well.

Result

With the new AccuLoad IV flow computers with colour touch screen in combination with Emersons MicroMotion mass flow rate meter, Zeeland Refinery now has a modern and reliable installation at its disposal.

The new Scully earthing control and overfilling protection ensure simpler operation for the drivers and a considerable increase in safety. Thanks to this investment Zeeland Refinery can serve its customers with a high-performance measuring installation.

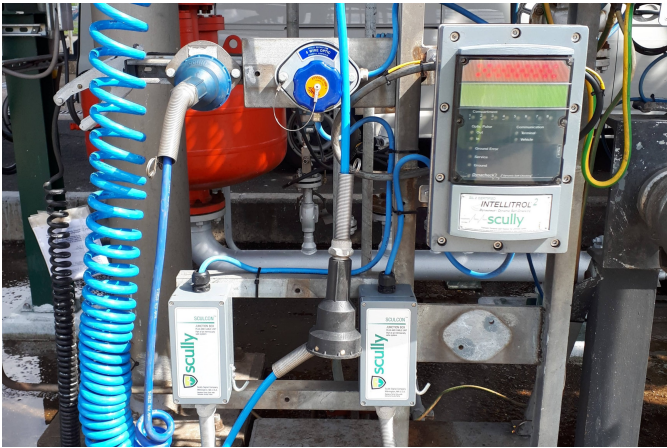

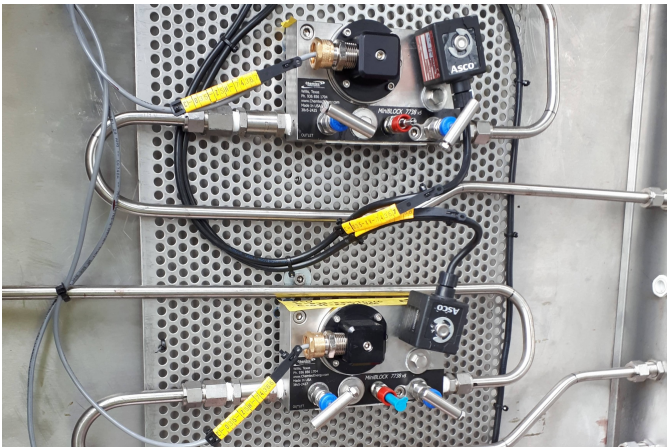

Actions

DCM EMBA took responsibility for the engineering and commissioning of the new measuring equipment.

Installation and calibration work was carried out by our own service department.

The whole measuring installation was also declared MID-compliant under the supervision of DCM EMBA.

CASE STUDY IMAGES

WHY DCM EMBA?

DCM EMBA offers its customers full technical solutions for liquid flows in sectors including the oil, gas and chemical industry where measuring, expertise and uptime are the priorities. We supply high quality verifiable measuring instruments, installations, expertise and services to have these flows proceed optimally at all times

Your liquids, our Metering & Control expertise
